

SIMPLY 5

Vertical batch freezer

- **Simply** is much more than a batch freezer, is an effective means for the fulfilment of dreams of experienced ice cream makers and an indispensable tool for beginners.

- Valmar Global does not manufacture ice cream making machines merely to satisfy the ice cream makers' demand, it designs them because loves to do it and is good at it. Valmar Global's technicians are passionate inventors and the 5 patents comprised in **Simply** are evidence for this.

- Ice cream is at the center of attention and with **Simply** its production is simple and fun regardless of the recipe. The production procedures (programmes) are easy and intuitive. The same goes for the operation of the machine which with its ergonomic design fits in every production line where Snowy and Smarty are already present. Simply offers the same characteristics as other Valmar global models which are renowned for short production cycles of compact and solid ice cream and energy savings. Production times are the same in all models.

- The quantity of load per freezing cycle is extremely flexible in the whole range of Valmar's batch freezers and combined machines.
